

INTRODUCING

DUTCH AGRICULTURE ULTRA LOW DISTURBANCE OPENER

The Dutch Agriculture Ultra Low Disturbance (**ULD**) opener was designed to ensure faster travel in the field, and reduce soil throw all while maintaining accurate seed placement. Producers were asking for a product that ensures versatility and durability at the same time offering less soil disturbance. The result is an opener that captures all of that. Our testing has shown seeding speeds increased 20% over what the producers were previously using. With producers always looking for ways to increase efficiencies during the seeding season, this is a true game changer.

Testimonial

"We had bad stepping issues and bending of our seed boots. We weren't getting our seed placed where we wanted it to be, so we knew we needed to make a change to the Dutch Agriculture ULD opener. With our new Dutch Openers we had less soil disturbance and less stepping. Our plant count was the best we've ever had. The opener allowed us to speed up by a whole mile per hour. I'm very impressed with this product and I think it's going to change the industry."
