## ULTRA LOW DISTURBANCE (ULD) SERIES

The Dutch Agriculture Ultra Low Disturbance (ULD) opener was designed to ensure faster travel in the field, and reduce soil throw all while maintaining accurate seed placement. Producers were asking for a product that ensures versatility and durability at the same time offering less soil disturbance. The result is an opener that captures all of that. Our testing has shown seeding speeds increased by up to 20%. With producers always looking for ways to increase efficiencies during the seeding season, this is a true game changer.

NEW

### Testimonial

"My reason for purchasing the Dutch Ultra Low Disturbance [ULD] opener was driven by efficiencies. I was looking into running a third seeder but wasn't wanting to spend the money to purchase the third drill, as well as figure out how we would logistically manage it all without adding extra manpower. When I heard about the ULD opener from Dutch allowing you to gain 1 mph, I worked the numbers out on our farm and realized the acres gained per day was equivalent to running a third seeder."
